

Data for START contractor
Dan Gravatt to: Roy Crossland

04/04/2012 01:06 PM

Roy,

As we discussed, here are the files containing the data I need the contractor to graph:

This link takes you to the Supplemental Feasibility Study (SFS):

http://www.epa.gov/region7/cleanup/npl_files/west_lake_landfill/index.htm

In the SFS, look at Appendix B-1, Tables 4 and 8, which are titled "**Table 4 : Area 1 Soil Intervals that Exceed Cleanup Levels**" and "**Table 8 : Area 2 Soil Intervals to be Excavated**". These are on pages 615 and 632 of the overall PDF file. The yellow-highlighted rows correspond to soil borings with elevated levels of radionuclides. We want to create geologic cross-sections with this data to graphically depict the ranges of depths that these levels are found within the subsurface in these borings. I have not yet decided the exact sets of these borings to include on the cross sections; this is something I can discuss with the contractor's techs once they have the data in their systems.

Also in the SFS, look at Appendix B-2, attachments A, B, and C which are on pages 673, 675 and 677 of the overall PDF file. These files contain the northing and easting coordinates and surface elevations of soil borings at the site. We want to use these to create a better site map with an airphoto base layer, and to properly position the borings in our cross-sections both horizontally and vertically.

RI Tables.pdf

Table 4-3 in the "RI Tables.pdf" file attached to this e-mail contains the northing and easting coordinates and surface elevations of the monitoring wells at the site. We want these wells on the site map as well, color- or icon-coded differently from the soil borings and divided into shallow, intermediate and deep categories with different colors or icons.

Sincerely,
Daniel R. Gravatt, PG
US EPA Region 7 SUPR / MOKS
901 North 5th Street, Kansas City, KS 66101
Phone (913) 551-7324 Fax (913) 551-7063

Principles and integrity are expensive, but they are among the very few things worth having.

Lead-212	2.26	0		7.26	0	
Bismuth-212	NE	NE	NE	5	0	
Thallium-208	0.71	1	0.79+/-0.83	5.71	1	6.8+/-2.1

All values expressed as pCi/g.

NE = Not established, all background samples below minimum detectable activity. NA = 2 Sigma Error (+/-) is not available.

A total of 8 surface soil samples were collected in Area 1. One of the samples was split and analyzed at two different laboratories. For some of the radionuclides, the results from one of the laboratories were greater than the background or reference levels, while the results from the second laboratory were not.

Table 6-2 : Summary of Radionuclide Occurrence Above Reference Levels in Area I Subsurface Samples

Radiological Constituents	Background Value (mean + 2 std. dev.)	> Background but < Reference Range		Reference Level	> Reference Level Range	
Uranium – 238 Decay Series						
Uranium-238	2.24	5	2.89+/-0.56 to 6.94+/-1.28	17.24	2	17.8+/-4.1 to 26.4+/-10.1
Thorium-234	2.76	0		17.76	0	
Uranium-234	2.73	6	2.92+/-1.46 to 15.6+/-3.6	17.73	0	
Thorium-230	2.45	6	2.47+/-1.26 to 7.52+/-1.65	17.45	6	23.2+/-4.9 to 1,500+/-240

Bismuth-212	NE	NE	NE	15	0	
Thallium-208	0.71	0		15.71	0	

All values expressed as pCi/g.

NE = Not established, all background samples below minimum detectable activity. NA = 2 Sigma Error (+/-) is not available.

A total of 39 subsurface soil samples were collected in Area I. Field and laboratory duplicates were prepared for several of the samples. Two of the samples were split and analyzed at two different laboratories. For some of the radionuclides, the results from one of the laboratories or from one of the duplicate samples were greater than the background or reference levels, while the results from the original sample or second laboratory were not.

Table 6-3 : Summary of Radionuclide Occurrence Above Reference Levels in Area 2 Surface Samples

Radiological Constituents	Background Value (mean + 2 std. dev.)	# Detects	> Background but < Reference Range	Reference Level	# Detects	> Reference Level Range
Uranium 238 – Decay Series						
Uranium-238	2.24	3	3.1+/-0.7 to 4.17+/-1.04	7.24	2	134+/-42 to 294+/-92

All values expressed as pCi/g, except detection frequency.

Four background samples were analyzed. Samples without detections were not used to calculate background statistics.

-- = Radionuclides were not detected above the Minimum Detectable Activity (MDA) in any of the four background samples.

Notes: Soil analytical data expressed as pCi/g ± 2 Sigma Errors associated with these data are included in Appendix B

--- indicates sample result is below specific Method Detection Activity (MDA)

--- indicates no activity above the reference level

* indicates a second double gamma survey, after soil that was accidentally kicked into the boring was extracted

--- indicates not reported

Results shown on this table for the PVC borings include down-hole gamma log results collected by McLaren Hart in 1995 and radionuclides analytical data from Table 8 of the report "Radiological Survey of the West Lake Landfill", RMC, 1982. Radiation Management Corp (RMC). The PVC borings were drilled, gamma logged, and sampled in 1992 by RMC; and relogged in 1995 by McLaren Hart. Some settling may have occurred in the PVC borings, potentially resulting in a shift in the gamma peak relative to the soil sample results.

Table 6-12 : Summary of Estimated Areal Extent and Volume of Radiologically Impacted Materials at the West Lake Landfill

<u>Location</u>	<u>Areal Extent (ft²)</u>	<u>Areal Extent (acres)</u>	<u>Volume (yd³)</u>
Area 1			
Surface	50,659	1.16	940
Subsurface	193,915	4.45	23,490
Area 1 Total	<u>194,000</u>	<u>4.5</u>	<u>24,400</u>
Area 2			
Surface	468,709	10.76	8,680
Subsurface	817,052	18.76	109,240
Northeast area	17,159	0.39	320
Area 2 Total	<u>834,000</u>	<u>19.2</u>	<u>118,200</u>
Ford Property	196,000	4.5	3,600
Totals	1,224,000	28.2	146,000

Note: The thickness values used to calculate volumes were as follows:

Area 1 Surface	0.5 ft
Area 1 Subsurface	3.27 ft
Area 2 Surface	0.5 ft
Area 2 Subsurface	3.61 ft
Northeast area	0.5 ft
Ford Property	0.5 ft

Table 9-1 : Chemicals of Potential Concern (CoPCs) for Human Health Risk Assessment

Radiological CoPCs

Uranium-238 (for uranium-238 and 2 daughters)

Uranium-234

Thorium-230

Radium-226

Lead-210

Uranium-238 + Uranium-234 / 2 * 0.05 (for Uranium-235 and one daughter)

Protactinium-231

Thorium-232

Non-Radiological CoPCs

Arsenic

Lead

Uranium

Aroclor 1254

Table 9-2: Summary of Calculated Risks for Current and Future Potential Receptors

<u>Potential Receptor</u>	<u>Location</u>	<u>Radionuclide Cancer Risk</u>	<u>Chemical Cancer Risk</u>	<u>Total Cancer Risks</u>	<u>Hazard Quotient</u>
Current Scenarios					
Grounds keeper adjacent to Area 1	Onsite	1×10^{-5}	NE	1×10^{-5}	NE
Grounds keeper adjacent to Area 2	Onsite	4×10^{-5}	NE	4×10^{-5}	NE
Ford property grounds keeper	Onsite	6×10^{-7}	NE	6×10^{-7}	NE
Future Scenarios					
Area 1 grounds keeper	Onsite	6×10^{-5}	2×10^{-7}	6×10^{-5}	0.0059
Area 2 grounds keeper	Onsite	2×10^{-4}	3×10^{-8}	2×10^{-4}	0.0022
Area 1 Adjacent Building User	Onsite	1×10^{-5}	NE	1×10^{-5}	NE
Area 2 Adjacent Building User	Onsite	4×10^{-5}	NE	4×10^{-5}	NE
Area 1 Storage Yard Worker	Onsite	1×10^{-4}	NE	1×10^{-4}	NE
Area 2 Storage Yard Worker	Onsite	4×10^{-4}	NE	4×10^{-4}	NE
Ford property grounds keeper	Offsite	2×10^{-6}	NE	2×10^{-6}	NE

NE = No exposure anticipated because a complete exposure pathway does not exist.

Table 9-3: Uncertainties Associated with Estimated Human Health Risks for OU-1

<u>Source of Uncertainty</u>	<u>Potential Impact on Estimated Risks</u>	<u>Impact on Health Protectiveness</u>
Extent of OU-1 areas	Low	Increases Protectiveness
Heterogeneity of waste form	High	Increases Protectiveness
Bias in sampling	High	Increases Protectiveness
Inclusion of natural background	Low to moderate	Increases Protectiveness
Calculation of 95% UCL	Moderate	Increases Protectiveness
Current and future land use as commercial/industrial	None	None
Current and future receptors as occupational	None	None
Source release and environmental transport mechanisms	Low	None
Radon release model	Low	Increases Protectiveness
Future receptor exposure mechanisms at points of contamination	Low	None
Approximating exposure with simplified expressions	Moderate to high	Increases Protectiveness
Change in individual parameter values	Low to moderate	Generally increases Protectiveness
Slope factors and reference doses	High	Increases Protectiveness
No reference doses for some contaminants	Moderate to high	Decreases Protectiveness
External exposure source geometry	Moderate	Increases Protectiveness
Representative contaminant concentrations	Moderate	Increases Protectiveness

Table 9-4: Summary of Estimated Ecological Risks for Operable Unit 1

<u>Receptor</u>	<u>Hazard Quotients¹</u>	<u>Primary Contributors²</u>
Area 1		
Plants	547	Selenium and nickel
Invertebrates	152	Arsenic, chromium, copper, mercury, nickel and selenium
White-footed mouse	3,320	Selenium, arsenic and copper
Cottontail rabbit	5,750	Selenium, arsenic and copper
American Robin	16,000	Selenium, copper and cadmium
Area 2		
Plants	347	Uranium, chromium and lead
Invertebrates	144	Chromium
White-footed mouse	647	Selenium, lead and arsenic
Cottontail rabbit	1,700	Selenium and arsenic
American Robin	15,300	Selenium, lead, cadmium and chromium
Areas 1 and 2		
Red fox	154	Cadmium, selenium and arsenic
American woodcock	442	Lead and selenium
Red-tailed hawk	12.2	Selenium

1. As discussed in the text, the hazard quotients presented above are considered over-estimates of the potential risks.
2. These compounds were identified in the Baseline Risk Assessment as the primary contributors of risk to each of the potential receptor scenarios identified above. Occurrences of other chemicals present in OU-1 and 2 may also result in potential risks greater than the threshold values.
